

Keyboard Arm

EKA-200 Series Executech Keyboard Arms

The EKA -200 Keyboard Arm enables the user to align the keyboard with the monitor regardless of where the monitor is placed. It allows the user to get the keyboard into the lap, so the arms can stay back and close to the body. The entire mechanism stores out of the way when not in use and is easily installed in minutes with supplied hardware. When used with Executech's ERP-300 Reverse Angle Palm Rest, the EKA Keyboard Arm offers the operator greater comfort than other devices.
